Wide Spreading Unit V Spread

Unique | Perfect spreading quality | Working widths up to 36 m

Granular lime

Compost

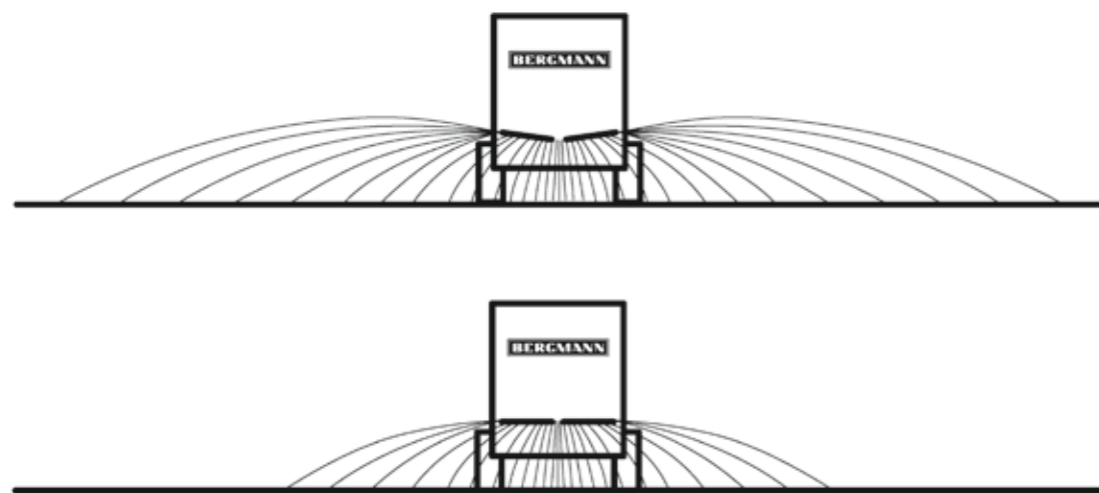

Lime

Mushroom manure

Patented and unique on the market:
 The new **BERGMANN** wide spreading unit **V Spread**
 The effective combination of the V-shaped arrangement of the spreading discs with a simultaneous increase in diameter enables a more even distribution of the spreading material over the spreading discs and thus also a perfect distribution in the field.
 Depending on the spreading material, this makes working widths (tramline spacing) of up to 36 m possible - and this with optimum lateral distribution.

Spreading pattern with **V Spread**

Spreading pattern with standard spreading unit

Advantages:

- ▶ Larger working width due to V-shaped spreading discs arranged lateral to the direction of travel
- ▶ Less passages per area due to larger working width, thus avoiding soil compaction
- ▶ Use of tramlines over 24 m also possible
- ▶ Increased throughput compared to standard spreaders
- ▶ Reduced wear due to reduced number of passages

V Spread is currently available for the **BERGMANN** universal spreaders

- ▶ TSW 5210 S
- ▶ TSW 5210 W
- ▶ TSW 6240 S
- ▶ TSW 6240 W
- ▶ TSW 7340 S

Our product range contains the right vehicle for every operation and every application.

- ▶ Manure Spreaders
- ▶ Universal Spreaders
- ▶ Loader Wagons
- ▶ Forage Transport Trailers
- ▶ Body Swap System
- ▶ Grain Transfer Trailers
- ▶ Beet Transfer Trailers
- ▶ Self-propelled Systems
